

	One skipped post (12.5' span)	Two skipped posts (18.75' span)	Three skipped posts (25.0' span)
Design deflection from face of rail (1)	? (3)	?	8' (LSC-1: 92.2" rounded to 96" = 8.0') (LSC-2: 77.5" rounded to 78" = 6.5')
"Clear zone" between first and last CRT post (2)	12.5' x ?'	18.75' x ?'	25' x 8'

(1) Design deflection is dynamic deflection rounded up to nearest half foot (p. 120 and 145, TRP-03-187-07)

(2) Max height of object within deflection is 2" (p. 101, TRP-03-187-07)

(3) Perhaps use deflection from draft skipped post report utilizing no CRT posts as we'll likely remove the CRT option for single post long-span
